## *PROFESSIONAL MASKS*

Set ACS 951 compressed air respirator from the line with mask and hood

ACS 951 is a continuous flow compressed air insulating respirator equipped with a hooded mask and a protective cape which make it an effective protective means for protecting the respiratory tract and the parts of the body most subject to the projection of abrasive particles. It is therefore the ideal device for the protection of operators engaged in sandblasting operations. The use of ACS 951 is made very comfortable by the presence of the EOD 55 silencer filter, which reduces noise to a minimum, by the possibility of regulating the continuous flow through the AC 95 regulator and by the presence of two exhaust valves protected by protective caps. valves that vent excess air to the outside. The very low weight, compatible with the protection and durability requirements of the materials used, and the ergonomic design allow for easy and effective use. The particular design of the ACS 951 facial, consisting of a mask integral with a hood - cape, makes it adaptable to any facial shape and perfectly adherent without annoying pressure. Its small size allows you to carry out operations even in the tightest spaces. The eyepieces are double (external glass and internal polycarbonate) and easily replaceable. The hood is sewn to the mask and protects the operator up to the waist. The mask is fed through the TUR 609 corrugated tube which conveys the air into the breathing area and which is positioned between the mask and the silencer filter, in turn connected to the flow regulator. The AC 95 flow regulator is equipped with quick couplings for connection to the supply hose. It is equipped with an insufficient flow alarm that activates when the minimum flow delivered falls below a set minimum and is mounted on a support shield equipped with a belt for positioning at the waist.
